American National Standard

The standard in this booklet is one of more than 10,000 standards approved to date by the American National Standard Institute.

The Standards Institute provides the machinery for creating voluntary standards. It serves to eliminate duplication of standards activities and to weld conflicting standards into single, nationally accepted standards under the designation "American National Standards."

Each standard represents general agreement on the part of manufacturer, seller, and user groups as to the best current practices with regard to some specific problem. Thus the completed standards cut across the whole fabric of production, distribution, and consumption of goods and services. American National Standards, by the Institute procedure, reflect a national consensus of manufacturers, consumers, scientific, technical, and professional organizations, and government agencies. The completed standards are used widely by industry as well as commerce and often by municipal, state, and federal governments.

The Standards Institute, under whose auspices this work is being done, is the United States clearinghouse and coordinating body for voluntary standards activity on the national level. It is a federation of trade associations, technical societies, professional groups, and consumer organizations. Some 1000 companies are affiliated with the Institute as company members.

The American National Standards Institute is the United States member of the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC). Through these channels U.S. standards interests make their position felt on the international level. American National Standards are on file in the libraries of the national standard bodies of more than 60 countries.
